DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 3-5, 8-10 and 13-15 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-7 of U.S. Patent No.6,744,920. Although the conflicting claims are not identical, they are not patentably distinct from each other because they claim the same subject.

Regarding claims 3-5, 8-10 and 13-15, claims 1-7 of the U.S Patent 6,744, 920 recite similarly limitation the only difference is that claims 3-5, 8-10 and 13-15 additionally recite by carrying out predetermined image processing. However

Art Unit: 2624

claims 1-7 of the U.S Patent 6,744,920 in the preamble recite comprising
therefore claims 1-7 of the U.S Patent include carrying out predetermined image
processing.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35
U.S.C. 102 that form the basis for the rejections under this section made in this
Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 17 is rejected rejected under 35 U.S.C. 102(e) as being
anticipated by Fukuoka U.S 6,104,430.

Regarding claim 17, Fukuoka disclose digital camera for outputting
white-balance adjusted image data having been subjected to white balance
adjustment processing and predetermined image processing by
carrying out, on original image data obtained by photographing, the
white balance adjustment processing using gain adjustment in a
color space in which the original image data have been obtained and
the predetermined image processing thereon, the digital camera (See Fukuoka
Fig. 16, col. 11. lines 30-35) and

Art Unit: 2624

outputting information regarding the white balance adjustment processing and information regarding the predetermined image processing together with the white-balance adjusted image data (See Fukuoka, Fig,16 and col. 11. lines 30-35).
